

PROStar™

MILES AHEAD

YOU NEVER KNOW WHAT'S POSSIBLE UNTIL YOU DARE TO DREAM THE IMPOSSIBLE.

Creating the world's most advanced class 8 tractor meant redefining the long haul in every way imaginable. So we did things different from day one. You could say our engineering process was anything but traditional. Then again, the same could be said for the truck. The International® ProStar™ Miles ahead. From the development to the drive.

- Unprecedented uptime was the goal. And with two million miles of road testing, 10 simulated years in a giant industrial shaker, and the valuable input from over 2,000 drivers, maintainers and fleet managers later, we achieved it.
- How is the ProStar the Class 8 tractor with the lowest cost of ownership? Because synchronized and extended service intervals give drivers 59 less scheduled maintenance stops. While over 60 innovative repair and maintenance features minimize downtime.
- A more fuel efficient ProStar was discovered in full-scale wind tunnel testing, validating a 9% reduction in aerodynamic drag. Which can potentially translate to an annual fuel savings of more than 4% when compared to a leading competitor.
- Drivers have never been happier. "On-center" steering improves highway handling. A four-point suspension counters sway. And automotive-style controls make it feel more like a car than a truck.
